

Practical No. 2

Cross-Website Functional Testing Using Selenium IDE

Aim

To develop and execute a test suite for two different websites using Selenium IDE and perform basic functional testing.

Tool Required

- Selenium IDE (Chrome/Firefox Extension)
- Google Chrome or Mozilla Firefox
- Internet Connection

Theory

Selenium IDE is a browser automation tool used to record, edit, and replay test cases without programming. It helps verify whether website features are working correctly.

Websites Used

1. <https://www.saucedemo.com>
2. <https://demoqa.com>

Test Cases

Website 1: SauceDemo

1. Open the website.
2. Enter valid Username and Password.
3. Click the **Login** button.
4. Verify the Products page is displayed.
5. Add a product to the cart.

Website 2: DemoQA

1. Open the website.
2. Navigate to **Widgets** → **Select Menu**.
3. Select a value from the dropdown menu.
4. Go to **Elements** → **Text Box**.
5. Fill the form with Name, Email, Current Address, and Permanent Address.
6. Click **Submit**.
7. Verify the entered details are displayed.

Procedure

1. Install Selenium IDE in the browser.
2. Create a new project.
3. Create a test suite.
4. Record test cases for both websites.
5. Save the test cases.
6. Run the complete test suite.
7. Check the execution logs and test results.

Expected Result

- Login should be successful on SauceDemo.
- Product should be added to the cart.
- Dropdown value should be selected successfully.
- Form should be submitted successfully.
- Entered details should be displayed correctly.

Execution Log (Sample)

Test Case	Status
SauceDemo Login	Pass
Add Product to Cart	Pass
Dropdown Selection	Pass
Form Submission	Pass
Data Verification	Pass

Result

The cross-website functional test suite was executed successfully using Selenium IDE. All test cases passed, and the expected results were verified.

Conclusion

Selenium IDE successfully automated functional testing on two different websites. It reduced manual testing effort and generated execution logs for test verification.
